Dear Aman Ji,

Kindly find the attached email communication regarding the ZBATCH_STOCK report. Please refer to the open points mentioned below. As per your queries, the issues have now been resolved. We have also attached the ZBATCH_STOCK report dump for your reference (for 2000 and 5000 plant codes).

1. **Expired batches not flagged as expired (Sheet A):** Expired batches are now correctly flagged as expired. The issue has been resolved.

2. **Negative ageing with stock availability (Sheet B):** Negative ageing with stock availability is now correctly displayed. The issue has been resolved.

3. **Expiry date preceding manufacturing date (Sheet C):** The issue of expiry date preceding the manufacturing date is resolved. Additionally, we have requested an enhancement in SAP: the system should not allow GR processing if the user enters an expiry date earlier than the manufacturing date during GR.

4. **Expired stock flagged without expiry date (Sheet D):** The issue has been resolved. Expired stock is no longer flagged in "Expired Stock" without an expiry date field; the system will now flag expiry strictly based on the provided expiry date.

Please feel free to reach out in case of any queries.

Thanks & Regards!

Subject: RE: Clarification on Inventory Monitoring in SAP

Dear Sir,

As discussed yesterday regarding the ZBATCH_STOCK report, we are facing an issue with the report. The matter has already been highlighted to our IT team for resolution.

In the meantime, we are monitoring the raw material shelf-life details in Excel and sharing the report on a monthly basis with all concerned stakeholders.

@Ramesh T Sir, Please review the auditors' observations and take the necessary action.

Thanks & Regards!

Dear Team,

As discussed, the batch-wise ageing report can be extracted from SAP through T-Code **ZBATCH_STOCK**. On analysing the report as on 31-Oct-2025, it was noted that the logic for material code creation and expiry configuration appears inconsistent, i.e. certain material codes that should not have expiry are maintained with expiry dates, while some codes transferred from the 1-series to RM-series *(for enabling batchwise expiry tracking)* do not reflect expiry data. This inconsistency may lead to unreliable shelf-life tracking and data integrity issues. Please clarify the process and control mechanism followed for defining expiry relevance in material master creation to ensure uniform application.

Based on the analysis of the ageing report, the following discrepancies were also observed:

1. **Expired batches not flagged as expired (Sheet A):** Several batch lines show expiry dates prior to 31-Oct-2025 but are not marked as expired in SAP (~78,434 units). Risk: Expired materials may remain available for issue or dispatch, indicating potential gaps in system-based blocking or periodic review controls.

2. **Negative ageing with stock availability (Sheet B):** Some batches reflect negative ageing despite stock presence, suggesting possible back-posting or incorrect GRN date entries. Risk: This can distort ageing analysis and impact the reliability of inventory valuation and shelf-life monitoring.

3. **Expiry date preceding manufacturing date (Sheet C):** Certain batches show expiry dates earlier than manufacturing dates. Risk: Such data inconsistencies point to errors in master data setup or transactional entry, affecting traceability and compliance reporting.

4. **Expired stock flagged without expiry date (Sheet D):** Some batches show "Expired Stock = Total Stock" even though the expiry date field is blank. Risk: Incomplete or inaccurate expiry data may weaken system controls for expired stock identification and compromise reporting accuracy.

Kindly provide clarification on the above observations along with the supporting documentation.

Thanks & Regards,

Aman Kumar Shah
