Warehouse Transfer through Sap
Verification Of transfer Entry

1. **Mandatory Entity Identification in Material Request**
   - Every Material Request (MR) must clearly specify the **source entity** (PEIPL / PEGEPL / PEPPL) and the **destination entity**.
2. **Store Executive Validation**
   - Store Executive shall **verify and confirm** that the entity mentioned in the MR matches the **inventory ownership** and the **material's physical location**.
3. **Supervisor Approval Prior to DC Printing**
   - The respective Supervisor / Department Head must **review and approve** the MR before the **Delivery Challan (DC)** is generated or printed.
   - No DC shall be released without this approval.
4. **Gate Team Verification at Dispatch Point**
   - The Gate Team must verify that:
     - The **entity mentioned on the DC** matches the **physical material**,
     - The **source and destination entities** are correctly stated, and
     - The material movement is authorized and documented.
   - Material shall not exit the gate unless all entity details are validated.

Creation of Stock Transfer Order (STO) – *ME21N* Steps:

1. Open transaction **ME21N**.
2. Select **Document Type: UB – Stock Transfer Order**.
3. Enter **Supplying Plant / Storage Location** and **Receiving Plant / Storage Location**.
4. Enter **Material Code, Quantity, Unit of Measure**, and any required internal references.
5. Ensure **correct entity selection** (PEIPL / PEGEPL / PEPPL).
6. Save the STO and share the STO number with the concerned stakeholders.

Key Control:

- Source and destination entities must be verified before saving the STO.
- STO must be approved by the Supervisor before proceeding to delivery.

Post Goods Receipt (GR) at Destination – *MIGO*

Steps:

1. Receiving store opens **MIGO**.
2. Choose **Goods Receipt** and select reference as **Outbound Delivery**.
3. Enter the Delivery Document number.
4. Verify **material, quantity, entity**, and **destination storage location**.
5. Post the GR to complete the transaction.
6. File the DC and system documents for audit trail.

Key Control:

- Material must be physically verified before posting GR.
- **Any discrepancy must be escalated immediately.**

If Required weekly reconciliation is to be Done .

Purpose : To outline the process for transferring materials between plants using SAP, ensuring accurate documentation, traceability, and compliance with organizational standards.

Scope : This SOP applies to the transfer of materials between plants within the organization using SAP as the primary system for planning, execution, and documentation.

Responsibility :

- Requesting Plant: Initiates the request and ensures payment to the donor plant.
- PPC Team: Coordinates and raises the purchase order (PO).
- Procurement Team: Processes the PO and communicates with stakeholders.
- Stores Department: Facilitates documentation, including Stock Transfer Order and invoices.
- Donor Plant: Manages GRN creation and material transfer in SAP.

Accountability: Head of Store / HOS for Store

Procedure

1. Receive Request for Material Movement:
   - The requesting plant submits a material movement request, specifying the required items, quantities, and urgency.
2. Raise Purchase Request:
   - The requesting plant raises a Purchase Request (PR) in SAP, ensuring accurate details and proper approval. Similarly the Donor plant create GRN for material Transfer
3. Communicate with PPC Team:
   - The requesting plant communicates with the PPC (Production Planning and Control) team to review and validate the request.
   - PPC team is responsible for raising the Purchase Order (PO).
4. Raise Purchase Order:
   - The Procurement Team processes the PO in SAP based on the request.
   - The PO is shared with relevant stakeholders, including the donor plant and logistics team.
5. Share Sales Order and Invoice:
   - The Stores Department of the donor plant prepares and shares the Stock transfer order (SO) and Invoice with the requesting plant.
6. Payment Processing:
   - The requesting plant completes the payment to the donor plant.
7. Goods Receipt Note (GRN) Creation:
   - The receiver plant creates a Goods Receipt Note (GRN) in SAP to document the transaction.
8. Material Transfer in SAP:
   - The material movement is recorded in SAP, completing the transfer process.

Post Outward Delivery & Generate SAP Delivery Challan (DC) – *VL10B*

Steps:

1. Open transaction VL10B.
2. Enter delivery due date and STO reference.
3. Select the STO line item and create Outbound Delivery.
4. Pick, pack, and confirm material in SAP (if applicable).
5. Generate SAP DC (Delivery Challan) from the Outbound Delivery document.
6. Share printed DC with Gate & Dispatch Team.

Key Control:

- Gate Team shall allow dispatch only with SAP-generated DC.
- Entity on DC must match the physical material and STO information.
